## Read2Me! [Latest]

Read2Me! is a simple utility, that allows you to read your text to you. It works as a stand-alone app, that means, you can use it under any window, while keeping the focus on the window you are working on. With Read2Me! you can:

- read any text to you
- fast read your text by voice
- skip unwanted text
- fast return to previous text
- fast return to previous page
- control the volume
- you can adjust it
- you can set up the abbreviations
- the app not only reads text, but also recognizes it
- text can be loaded from files

Read2Me! uses windows speech engine (windows speech recognition api). The real key to privacy on your Mac is a simple thing: don't use a computer at all. There are always ways to download and install a Virtual Machine that makes it look like a Mac, but even in a VM, you run on someone's private machine. If privacy is essential for you, use a tablet. Tablets are marvelous—they're great for reading, writing, watching movies, and of course, playing games. But the real draw is the multitasking. Not only do you have access to thousands of apps—and they're quite good apps—but you can browse the web, enjoy a game, and continue to work on your computer at the same time. But there's one problem: the size of the tablet. With such small screens, it's nearly impossible to use a mouse and keyboard at the same time. That's where the Logitech Type Cover Keyboard for iPad 2 comes in. At 0.5 pounds, this keyboard is smaller than what you'd find in Apple's Air (and it weighs just as much). It's also designed so that the two sides of the keyboard are actually split, giving you a full-size keyboard and a touchpad. If you want to use a tablet, but aren't sure about whether to get an iPad or an Android tablet, let this review tell you what it's like. We'll be taking a look at the Logitech Type Cover Keyboard for iPad 2 in the links below. Microsoft has been pushing Windows 8 for some time now with no end in sight. Surface was touted as a new tablet that would work on both Windows and Android but it didn't sit well with Android fanboys. With that in mind, Microsoft is hoping to work out the kinks in Windows
