AutoCAD has applications in architecture, automotive design, civil engineering, electronics, fashion design, fashion, graphic design, manufacturing, mechanical engineering, orthodontics, space, and surveying. History [edit] AutoCAD was developed by Chuck Jahnke and Jim DeFee in a Los Angeles AutoCAD class taught by Jim DeFee at Cal Poly Pomona. The new development was eventually shipped to UCLA for testing by members of the RCA Electronique group including Pierre Boudah, David Laguerre and Glenn Walters. The RCA group first met in 1976 and the first public use of the software was in 1979. Between 1980 and 1982, a non-profit corporation called The Computer Research Group was formed, with the aim to preserve and distribute the computer-aided design program. Its main markets at the time were college and university courses where only enough copies could be purchased to go around to the class. The non-profit was founded with funding from Rockwell International. In 1981 Chuck Jahnke's son Chris joined the company and the software product was renamed AutoCAD. The first version was released in December 1982. At the time, AutoCAD ran on the HP-16/C microcomputer, while the first public version ran on the HP-41c. The first HP-41c in the market cost US$21,000, while an HP-16 could be purchased for US$11,000. Over 200 universities in the US and Canada bought licenses. AutoCAD was the only CAD application available on the Apple II. In addition to the HP series, other microcomputers which supported AutoCAD were the Motorola 6800 (1984), HP-20c (1986) and the DEC-20/LAUNCHR (1984). In the summer of 1983, Richard Pick, who had previously programmed for the Byte Shop (an early distributor of AutoCAD), wrote an equivalent program called "Autocad Lite" for the Apple II. This program was released in September 1983. When the original product developed by the company to automate the drawing of computer-aided design models was released, it was known as "AutoCAD", but the company's name is now Autodesk. In 1998, Autodesk gained majority control over the U.S. aerospace software company Aviant Corporation, which would become Aviant Systems Inc., a software company focusing on the design of aerospace systems

Ottawa won 3-2. (Fred Chartrand/The Canadian Press via AP) The Ottawa Senators got some good news in their favor following their 3-2 shootout win against the Carolina Hurricanes Tuesday night. Forward Mikael Karlsson, the team's highest-scoring forward and fourth-overall draft pick in 2017, returned to action in Ottawa's fourth game of the 2019-20 season. Karlsson was the leading candidate to make the Senators roster out of camp after scoring seven goals and earning a pair of secondary assists during the club's preseason campaign. Karlsson was on the bench for Ottawa's third game of the season, which took place on Oct. 2 in Pittsburgh, but the 24-year-old centre was back in action Tuesday night in Ottawa. The rookie had missed the team's last three games with an upper-body injury. "It feels great," Karlsson said of his return. "We didn't know if I was going to play in the next game, but it's great to be back here. I feel great." The Senators forward opened the scoring in Ottawa's shootout win against the Carolina Hurricanes on Tuesday night. Rookie defenceman Erik Brannstrom scored the Senators' first of the game. Senators defenceman Cody Donaghey, who returned to action Tuesday after missing five games with an upper-body injury, played a big role in the win for Ottawa. Donaghey made a huge play on the Senators' second goal of the game, as he blocked a shot by Hurricanes defenceman Jaccob Slavin to keep the puck in play. After the puck went over the goal line, Donaghey circled in and poked the puck loose before the Hurricanes could recover. "I felt good out there," Donaghey said

Useful tool: Split design elements into separate files. In AutoCAD, elements can be split with no change in their relationships, which can help maintain structure and continuity. (video: 1:34 min.) The new clip tool allows you to select, copy, and paste elements. Structure tabbed tool windows: Place elements with drag and drop, and combine objects on screen with one click. (video: 1:32 min.) Reorder elements with their bounding box, making it easy to change the overall layout of the drawing. Draw objects and text with curved strokes. (video: 1:45 min.) Fine-tune drawing details with enhanced functions of the snap to grid and align to grid tools. (video: 1:46 min.) Increase accuracy with the enhanced level of detail that can be achieved with the extended line weight features of the pen tool. Simplify your drawing with the new ability to change pen settings with a single keyboard shortcut. AutoCAD's Intelligent Window Management: Stop the program from eating up your RAM and disk space. (video: 1:36 min.) Save and use your RAM more effectively. Real-time feedback. Extend your drawing speed. Integrated drawing tools: Build geometry with integrated construction tools. (video: 1:33 min.) Select elements on screen with a single click. Show and hide objects with a single click. Attach objects with a single click. Cut, paste, rotate, move, or scale an object. Disconnect and reconnect objects. Fine-tune object placement with the new Placement tool. Edit an object with multiple views. Create and place text with a single click. Block and insert text with a single click. Inspect and repair a drawing. Integrate geometric and engineering design with project information, such as style information and constraints. Integrate AutoCAD's CADD capabilities with new workflows for creating forms with geometric details, such as surfaces, sections, edges, and conics. Draw the most accurate polyline or curve. Integrate Vectorworks, and the ability to open a linked DWG, with CAD elements you can create. Interactive commands: Drag and drop commands for 3
