Adaptive Synchronization is a utility that can synchronize data to a network drive via Rsync. After configuring settings, the tool will start the synchronization process by sending changes from a selected source folder (a folder that will be synchronized) to a destination folder (a folder to which this synchronize will be sent). With Adaptive Synchronization, you can synchronize folders on local computer to folders on a network drive, or from a network drive to local one. You can synchronize changes in both directions. Adaptive Synchronization supports multiple rsyncs. When running multiple rsyncs, the utility displays an indicator for each synchronization in the taskbar. From the indicator, you can check the status of running rsyncs. If one rsync has stopped, you can interrupt the running rsync by right clicking the indicator. Compared to other utilities that are compatible with a similar purpose, this program may be easier to operate. Since, in case of this software, the optimization of the program has priority over ease of use.
