## Somic G945 Driver

Stiff headphones are little difficult to use. It's not just an issue of having a thick cable; indeed, noise isolation plays a key role. After all, the reason they're so well priced is the lack of an amplification circuit and battery. Few of the popular and less expensive models have a headphone socket at all, and if they do they are cheap and unreliable. No, the reason to choose a soft headphone is that it is super comfortable to wear for hours on end. It's like the best of thick cable and no amplification at all. Not that thick cable is bad; in fact, it really could be a pain to use if the wearer lacks an amplifier circuit and a fairly large battery, which is most of the time. STIFF HEADPHONES If you still need to have headphones that will last you a long time, the possibility of choice is, in fact, quite limited. There are many types available with different materials, ranging from aluminium to plastic. In general, there are two types of headphones: thick-wire, "open-back" headphones and thin-wire, "closed-back" or "on-ear" headphones. There's actually no consensus among audio experts as to which type is best. There are pros and cons with both types, as well as types in between. If you are not already familiar with these headphones, you should read this page first. If you are already familiar with them, read the section below. Headphones are built in a few different ways. The old method was to just put two small transducers, or speakers, in your ears, but they all had the same problem. They could not be heard when you listened to music, not to mention hearing them when you talked to someone. The excellent headphones, of course, are the closed-back ones, which allow you to hear your environment without being distracted by the sounds of everyday life, while not listening to noise or disturbing your conversations. FROSTED HEADPHONES The downside of these headphones, however, is that they're difficult to wear for long periods of time. If you wear them for long periods of time, the earpieces will become frosted, making it so that the music you hear is muffled. There are quite a few ways around this problem, but not many are good, such as using an elastomer ear-canal cushion, or being careful when cleaning them.
