Developed by EA Canada, it revolutionized sports games and has players across the world asking "What is FIFA?" to describe how football is played in their country. In FIFA, one of the most realistic football games on the market, you play one of 32 teams from eight world cup winning teams in the historic World Cup mode. In Career Mode, you have the opportunity to manage your players to the top of the game and get them into the World Cup. In Ultimate Team, you build an ultimate dream team of the top football players, playing as one of 20 sports leagues around the world. Players can also compete in online leagues or the official international tournaments. In 2014 FIFA 15, a big focus was made on the new FIFA Infinity Engine, a new engine that allowed for an updated physics engine and gameplay advances. In FIFA 15, the new engine brought with it the abilities to control players more naturally and make changes to the game with the press of the analog stick. FIFA Ultimate Team has continued to add and improve on the game content with the addition of Major League Soccer, UEFA Champions League, Hyundai A-League, an all new W-League (Australia), and so much more! FIFA Ultimate Team still remains the most authentic way to bring the game into your living room. ## **What's new in Fifa 22:**

- **Anticipate:** You can now unleash the power of anticipation to improve your team's performance. Widen the gap between inside and outside positions by using seamless control of the attacking halves, letting your players move with any angle on the pitch, anywhere on the pitch. No more, "stick to the channel" - go wide.
- **Ball Possession Match Engine:** Gain and retain the ball effectively. It makes a huge impact on how the game plays and how you need to play. Let your players retain the ball, move it quickly, and midfielders now have greater pressure on defense.
- **20 Sevens - More and faster game play** leading to more and more exhilarating matches. Players now jump onto the ball when you press the pass button, so more unpredictability and more action. The sevens allows for more passes, more touches, more control of the ball, ball movement and intelligence by your players.
- **Teampay Squad Tactics: Or attack, or defend:** Move your players intelligently, support, and rotate them to create the most challenging team play experience ever. Make the right pass to support your teammate, call for a specific assignment, or use the Flanker Play to surprise the opposition. The deeper importance of Teampay has been re-deployed to give you and your teammates more control. Skillful and intelligent teampay is now more crucial to team success.
- **Mentality Controls:** Help your teammates stick to the style and strategy of play you want to use. Maneuver your play style according to your team's game plan; call for specific tactics depending on formation, tempo, and opposition. Everyone on your team will be more successful when you play according to your team's plans, not yours.
- **Speed and Reflex Decisions:** Decisions are faster and more reliable. You can now use the touch function in a variety of modes, and gain an insight into exact speed for both short and long passes and sprints. This has implications for your vision, passing (via predictors), and rotations - to make

Playability Superior player movement and a new ball control system FIFA 22 introduces fundamental gameplay advances for PS4 and Xbox One, such as a new ball control system that makes it easier to dribble past players while keeping the ball out of the net. This makes dribbling more realistic and encourages dribblers to jink and dance into space more. FIFA's new player movement system, which features responsive and realistic player animations as well as the ability to force tackle and run through a defender, brings the game closer to real-life football. This makes it easier to make challenging plays in defense, and also allows players to dribble past opponents more easily. Pitch and field art and animations have also been enhanced to give players an increased sense of realism and authenticity. Overall gameplay balance The AI will respect the new ball control and will likely be more timid and deferential to the player controlling the ball, so the player can dribble past them with greater freedom.
