use a flash drive, thumb drive, hard drive, USB port, or other type of storage for your images. * **Develop:** This area provides many important functions, including cropping, resizing, converting images, adjusting colors, enhancing specific areas, and removing artifacts. * **History:** Photoshop stores a history of editing options you may have used on an image. If you have modified an image, this area provides a list of all changes you've made. * **Layers:** This area is the heart of Photoshop. You use different layers to manipulate different areas of an image. For example, if you edit out an eye, you have the option of showing or hiding

Um.. hello, I was looking around for an

example of this trait macro with rust documentation and I found what I was looking for! There is a trait macro for win32 api, which uses String to represent Windows error code. trait Foo { win32_api! { #[doc(alias = "STDLIB_ERRNO")] unsafe extern fn errno() -> ::std::os::raw::c_int; } } I would like to do the same, but with ASCII strings instead of Windows error codes. Here is my attempt: This is awesome! I'm trying to implement something similar for Rust, but was just getting started on the API macro stuff, so I found this really nice example of the same thing in another language which is working for me. So nice to see

it comes from the safe department rather than unsafe. It appears Win32 API provides lots of such implementations as macros, and not all of them follow the same guidelines -- I had a similar question (what does the "Box" annotation mean in the implementation of macro with a box?) for when they actually do work. Do you have a good link or resources for understanding exactly how it works, and what implications or caveats it has?Primary Menu 'Tis the Season This year has been a mixed bag, to say the least. My mother has been battling cancer for almost two years now and recently underwent multiple rounds of

radiation that have left her temporarily homeless. My sister has been living in limbo after losing a battle against cancer, and my cousin has recently gone to prison and won't be coming home anytime soon. While we are left with some wonderful reminders of what our loved ones mean to us, it's been a rough ride these past few months. The holidays are usually a big deal for me, and I had big plans this year. But then this happened… This has happened before, and it's always been a roller coaster for me. I'm still not over it, I'm still processing, and I still can't believe it. It's something that has long been "normal" for me, but those words have

never been more accurate than now. In fact, the tragedy of this time of year made me think about my mortality. I had always planned on dying when
