History AutoCAD was originally released as an add-on product to AutoCAD 2D, which was the world's first 3D CAD program. It was released for the Apple II, DOS, and DOS/VSE (precursor to Windows) platforms on October 27, 1985 and was officially released for the Apple Macintosh platform on September 23, 1987. The first Macintosh AutoCAD release to support a point-and-click interface for "as much or more of the drawing creation process than in the DOS-based version" was in 1989. In 1992, the operating system version was changed from 8-bit to 16-bit, and AutoCAD became the first application to require the use of 16-bit code. AutoCAD version 2.0 in 1995 introduced a comprehensive object database, which stored symbols, blocks, annotations, textures, commands, layers, and parts as objects and enabled operations on these objects using a programmatic API. The object database also became the basis for the function of the "Design Center" feature which introduced a "Project Browser" with which users could browse through and select objects on screen. AutoCAD 2D AutoCAD 2D, AutoCAD's predecessor, was first released in 1980. It was the first 2D CAD program for the Apple II. It became available for MS-DOS in 1981. In its first version, AutoCAD used a bitmap for all 2D shapes. The first versions of AutoCAD could import DXF files directly and could import and convert DGN files. The last version available for the DOS platform was AutoCAD version 3.0. AutoCAD 2D, unlike the original AutoCAD, was not ca3bfb1094
