A: I think you're looking for NSIS. See NSIS Quick Start for install info. In which I get geeky about knitting, photography, feminism, and other stuff. Happy Monday! I hope you're all doing well, and have gotten something done the past couple days! I'm feeling pretty slow today, but I'm glad that I can be productive with my time. I'm doing a lot of juggling around my workload over these last few days. I have to write content for my photography website, but in addition to that, I still have to deliver my blog class today. Because of this, I've not had as much time as I'd like to devote to my knitting, and I am starting to feel the pangs of wanting to work on something else, which I don't want to do if I can't keep up with the course at least for the next week or so. Though I'm not going to say anything to Craig that he can read between the lines, which would make this a fairly passive-aggressive post if I did. I know it's best to just keep things positive in any situation, even one as stressful as this, but I can't help but feel that I'm being a little bit of a pest in a way. I'm wondering, though: do I have any right to feel this way? Is it professional to complain about my own job, even if I'm not complaining about him in particular? Does anyone have any thoughts on this? I'm really tired, and I think that was the root of my frustration with my first two knitting projects. I had the first one all the way to finishing, and spent most of my free time just not knowing what to do with it, and then I got the second one for Mother's Day, and I really wanted to work on it, but I didn't have the inclination to do the first part of that, so I ended up not finishing it at all. But I do think the third one is going to be a breeze, though. Maybe I'll get to a point where I can carry on this conversation while I'm knitting. I'm at the point in the course where we're talking about the aesthetics of digital photography, and we're

A: You can do this with `sed echo -e "hello" | sed -e "s/\ /\ /g"` This will replace all the space in the string with / (Reuters) - The U.S. Federal Trade Commission said on Wednesday it agreed to settle two longstanding cases against U.S. tech companies that affect how they manage how users delete information from their devices. FILE PHOTO: The logo of the U.S. Federal Trade Commission (FTC) is pictured in Washington, U.S., February 4, 2019. REUTERS/Erin Schaff/File Photo The FTC said Amazon.com Inc, Google Inc, Apple Inc, Microsoft Corp, eBay Inc and China's Tencent Holdings Ltd had entered into agreements to delete data when a device is turned off or offline and "when the user takes appropriate action to cease using a device or application." The settlement, which is intended to go into effect in the coming months, will have no further impact on how those companies handle data on their devices. The companies will still make a good faith effort to delete data. The settlement also will have no impact on data security efforts that are designed to prevent hacking or identity theft or prevent collection of data by governments or other entities, the FTC said. The settlement comes in response to a 2017 FTC order requiring the companies to ensure that data can be deleted when a user "deactivates" a device or decides to discontinue using the device or application. The FTC also settled with Facebook Inc on Wednesday to require the social media giant to adopt a similar data-deletion policy. Facebook said it intends to implement the policy shortly. Monday's order requires Google, Microsoft, Amazon and Apple to delete data when a device is turned off or offline when a user takes "appropriate action" to cease using the device or application. The companies must also delete data on devices that are left unattended, including hotel rooms. The settlement comes six months after the FTC levied a record \$5 billion fine against Facebook for allowing third-party app developers to access the personal data of its users. The social media company was found to have not been upfront with users that the data was being collected by third-party developers and gave them permission to access the data even after Facebook made several changes to its policies, the FTC said. My problem is that when i run my application, i got no output. Instead of my outputs i got the windows command prompt box. I tried to add the interactive flag in my app, but it doesn't do the trick. A: The interactive flag is what you need, but be careful what happens if something goes wrong. Try something like this:

```
Process process = new Process();
ProcessStartInfo start = new ProcessStartInfo();
start.WindowStyle = System.Diagnostics.ProcessWindowStyle.Hidden;
start.Arguments = "your command";
start.Arguments = "/interactive";
start.WorkingDirectory = AppDomain.CurrentDomain.BaseDirectory;
start.UserName = "your username";
start.Password = "your password";
process.StartInfo = start;
process.Start();
```

Nitrogen removal by anaerobic ammonium oxidation in a recirculating system, fed by continuous and intermittent addition of ammonium and nitrite to bulk solution. Operational challenges with anaerobic ammonium oxidation (ANAMMOX) systems include the need for high biomass concentrations, the need to maintain dissolved oxygen concentrations, the risk of nitrite accumulation, and the occasional need to begin or stop biomass enrichment. In this study, we extended the operational time that could be achieved in a recirculating biofilm reactor system using a combination of both continuous and intermittent addition of ammonium and nitrite. When the system was run continuously, 50% of the time, there was no nitrogen removal. Also, only 10% of time could the system maintain nitrification at anaerobic ammonia oxidation activity. In contrast, when both ammonium and nitrite were intermittently fed to the reactor, 50% of the time nitrification was observed. The cumulative nitrogen removal in the system was about 90% after 60 days of continuous cycling at a loading rate of 1.5 g NH₄(-)(+)-N day⁻¹. The ability to support nitrification and accumulate nitrite to > 5 mg N L⁻¹ can be used to help prevent the accumulation of nitrite at high ammonium loading rates and the potential for nitrite toxicity to inhibit nitrifying activity./* * To change this template, choose Tools | Templates * and open the template
